SUMMARY

Master's student at Carnegie Mellon with a B.E. in Computer Science and hands-on experience in applied AI and full-stack development. Shipped production systems in Java/Spring Boot, React, and Python, including a full-stack ordering platform on AWS and a RAG agent system built on the Claude API, LangChain, and Databricks. Available from August 2026; no sponsorship required.

EDUCATION

Carnegie Mellon University

Master of Information Systems Management – Business Intelligence and Data Analytics GPA: 3.74

Pittsburgh, PA

08/2025 - 05/2027

University of California, Irvine

Exchange Program & Professional Certificate in Data Analytics for Business GPA: 4.0

Irvine, CA

09/2024 - 06/2025

Hangzhou Dianzi University

Bachelor of Engineering in Computer Science and Technology (GPA: 89.52 Dean's List)

Hangzhou, China

09/2021 - 07/2025

SKILLS

Programming: Java, JavaScript, Python, SQL, C, C++, R, Kotlin, Go

Frameworks and Libraries: Spring Boot, Express.js, Node.js, React, LangChain, RESTful APIs

Cloud and DevOps: AWS, Google Cloud Platform, Docker, Azure, Databricks

Databases: MySQL, PostgreSQL, Elasticsearch

Tools: Git, Postman, Spark, Tableau, Power BI, MATLAB, SPSS, PowerShell

AI: Machine Learning, Deep Learning, RAG, MCP, Agentic AI, Fine-Tuning, Prompt/Context Engineering

EXPERIENCE

FedEx

Data Science Intern

Memphis, TN

06/2026 - 08/2026

- Built a multi-factor risk-scoring **AI Agent** engine in **Python**, weighting 4 risk dimensions (guard cost, repair cost, duration, compliance) across 3 facility types to replace static FIFO queuing; reducing annual guard cost from \$1.4M to \$1.2M and cutting average time-to-action by 7%
- Implemented a greedy best-first algorithm to auto-generate prioritized action plans across 2 ranking modes; shipped as a monthly automated pipeline that cut untracked non-compliance cases from 73% to 43% of facilities
- Built a **RAG**-powered **Claude API** assistant via **Databricks** and **Azure** with **Scikit-learn TF-IDF** retrieval over facility records, with a human-in-the-loop approval step before any action is committed
- Owned end-to-end development of **Python** models to predict package loss for FedEx Europe, integrating 8,000+ annual customer claims with thousands of daily scan and miss-committed records to surface loss patterns across the shipment journey; wrote **SQL** via **SSMS** to extract scan data for large-scale processing

Ligentia

Data Scientist Intern

Irvine, CA

03/2025 - 05/2025

- Analyzed energy consumption-output data from 50+ machines using **NumPy** and **Pandas**; co-developed 6 **Python** models with **Scikit-learn**, recommending a polynomial regression model that optimized energy efficiency
- Extended **Power BI** with custom **Python Plotly** visuals for client-facing analytics; standardized 5+ dashboards into reusable reporting structures, reducing dashboard development time

PROJECTS

Multimodal RAG Chat Application <https://github.com/EvieWei0720/ChatAI-Sound>

02/2026 - 04/2026

- Built an end-to-end chat application with **React** frontend, **Express.js** backend integrating **GPT**, **Speechify API** and **Serp API** to support real-time text and voice-based AI conversation
- Implemented **RAG** pipeline with **LangChain** and **MCP** to enable context-aware, document-grounded responses; designed **MySQL** schema for persistent chat history storage
- Designed React component architecture supporting both text and audio output, enabling a multimodal conversational experience

Food Online Ordering System <https://github.com/EvieWei0720/OnlineOrder>

12/2025 - 02/2026

- Developed a full-stack food online ordering system with **Spring Boot** backend and **React** frontend, deployed on **AWS App Runner** for scalable and production-grade access
- Built layered Spring Boot architecture (Controller - Service - Repository) with **Spring Security**; integrated **Caffeine Cache** to minimize repeated **PostgreSQL** lookups on high-read endpoints
- Implemented data access with **Spring Data JDBC** backed by PostgreSQL; containerized database with **Docker** and managed via **AWS RDS**
- Built restaurant browsing, menu search, cart management, and checkout flow in React with Ant Design; integrated **RESTful API** endpoints for user registration, menu search, ordering, and payment processing
